Reported-redshift E1 contrasts: 64 fixed-model fits
Points: GLS means | Bars: coordinate projections of joint 95% ellipsoids (3 dof)

full: Ex | n = 755,850

full: Ey | n = 755,850

full: Ez | n = 755,850

known_cut_margin: Ex | n = 558,407

known_cut_margin: Ey | n = 558,407

known_cut_margin: Ez | n = 558,407

Fixed model: lmax / angular RMS / template RMS

Low minus high reported-z E1 (microarcsec/year)

Conditional on each declared Gaussian covariance model and the same fixed selected design.
Reported-z bins: low [0, 1), high [2, 10). RMS values are in microarcsec/year.
Bars are projections, not the full ellipsoids; no empirical coverage or cosmic-acceleration claim.
Conditional fixed-selection diagnostic; transfer source: none. No empirical coverage or physical interpretation.
