D07 actual joint calibration contrasts • 559 pairs / 75 supported calibrator rows
C0 / CONDITIONAL • tmin=1.41729 reference units; 97 bounded LPs
ζ = η − κP: relative calibration field; shared γ bounded ±0.02 mag
t = tmin + 0
t = tmin + 1
t = tmin + 2

Original J2000 raw dipole / STF quadrupole coefficient basis
Segments preserve raw LP endpoints; tiny tmin crossings unresolved at solver precision, not confidence intervals.
Absolute common calibration η and latent apparent θ are unbounded in this declared model; physical interpretation unavailable; science HOLD.
