

Full-tensor orbit ranks: 5 non-rejections; 25 unresolved intervals

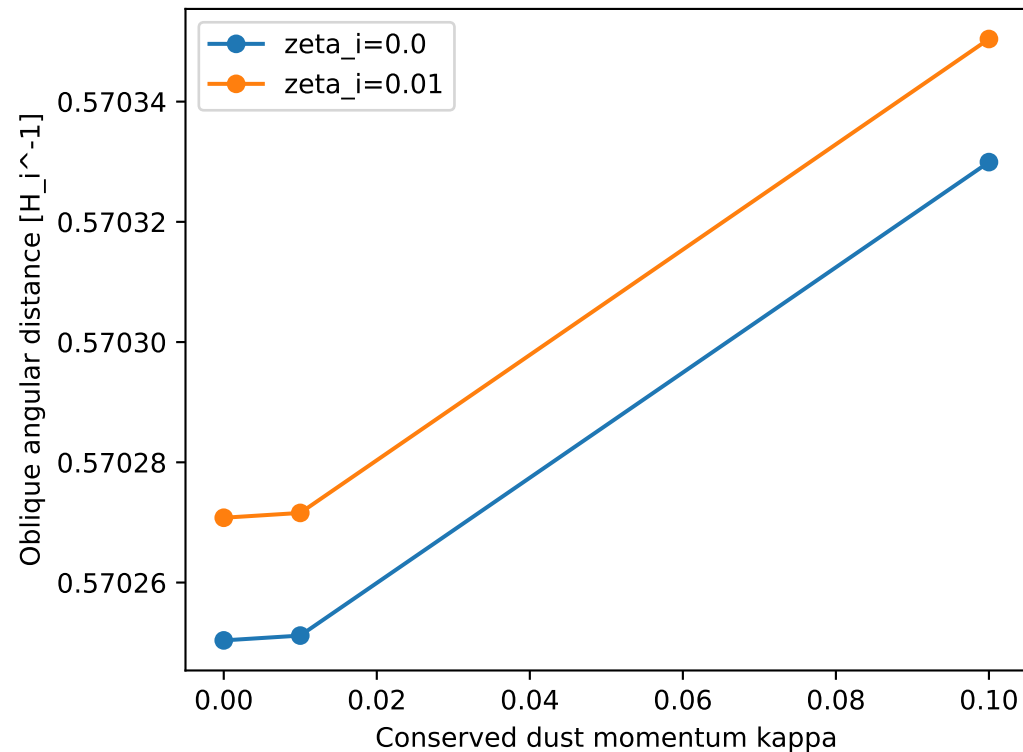

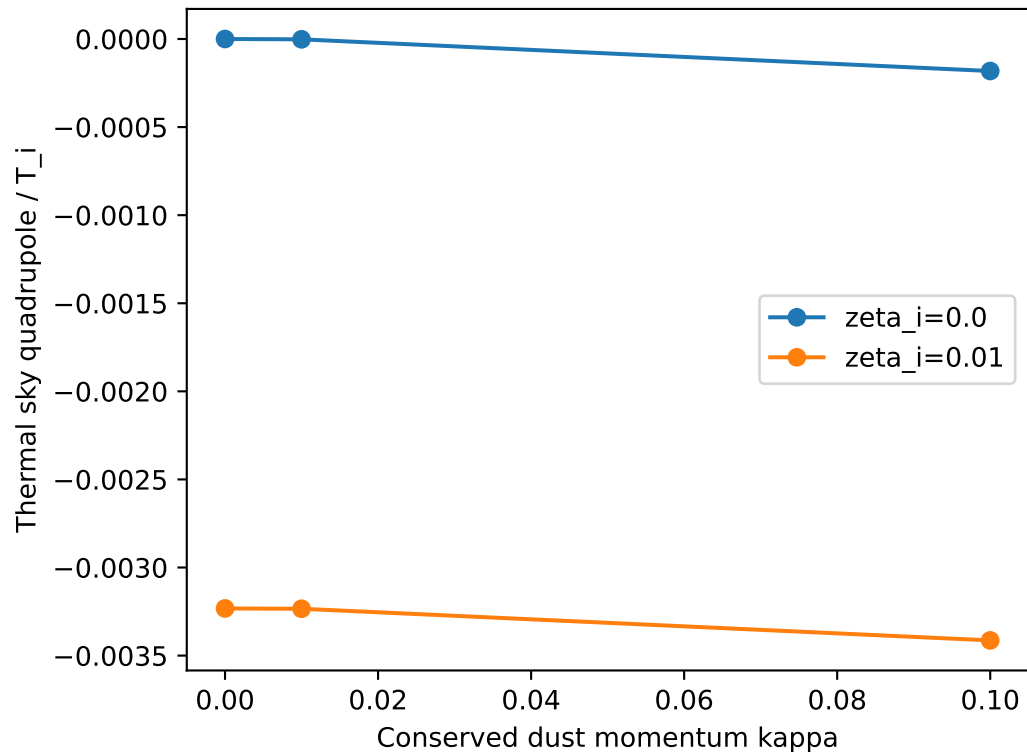

Union3 approximate compressed scenario: $\Omega_m=0.35592$; no exact coverage claim

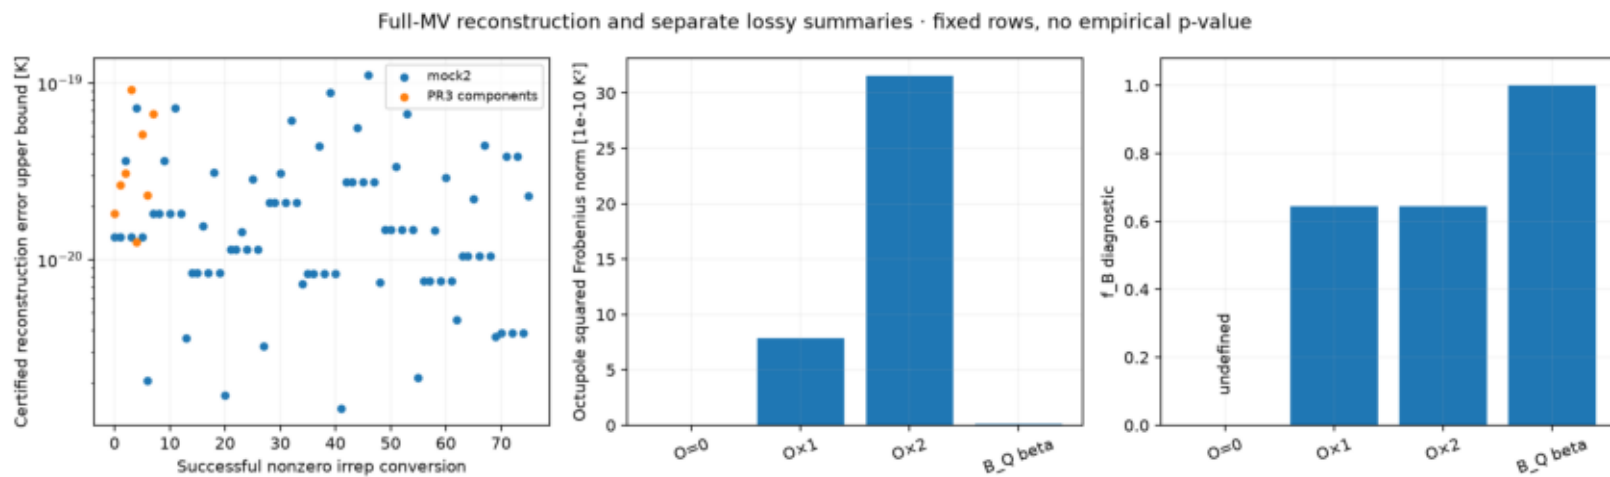

Coupled R3 history and executed reverse rays: coarse histories fail; tighter settings pass

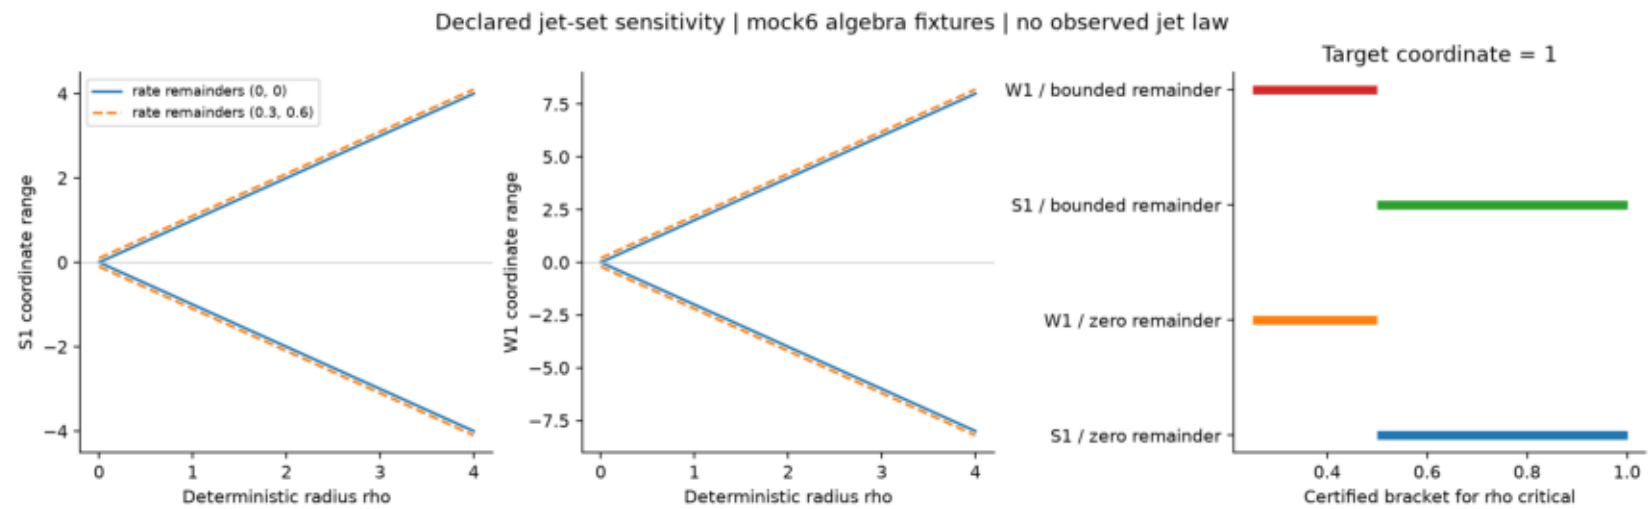

Restricted R3 predictions at a=2: no observed sky/distance law is attached

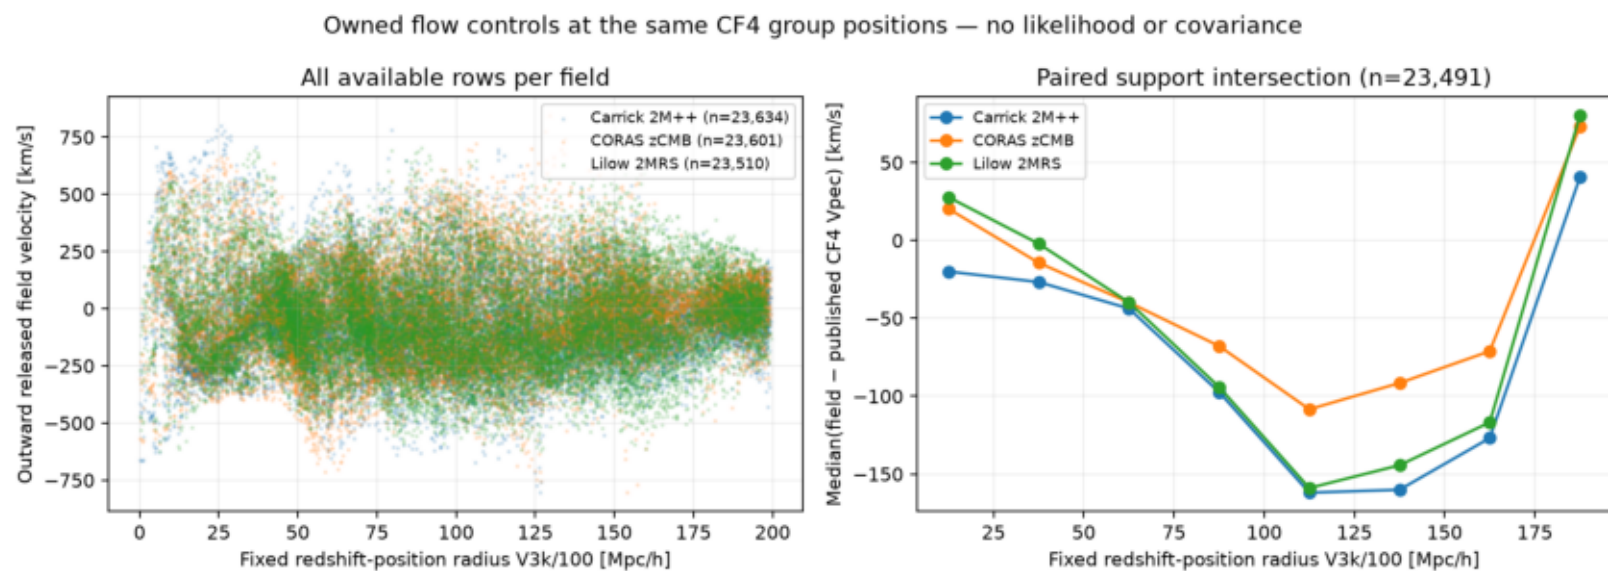

Full-MV reconstruction and lossy descriptive controls

Conditional jet/remainder frontiers; no empirical jet law

Owned flow controls at shared CF4 positions; no likelihood

PR3 same-sky component differences; no independent null pool
