Calibrated entropy-response frontiers: static analytic-family toy
Which spectral shape does the detector see?
Dimensionless response kernel
Bounded detector kernel
Number-energy projected kernel (MB)
$E/(k_B T_*)$
MB reference: eta = 0
Finite-amplitude extremizer
Local Fisher approximation
Response change / reference ray number
Entropy budget / reference ray number
BE reference: eta = -0.5
FD reference: eta = 1
